Ivermectin (STROMECTOL) tablets Criteria for Use September 2021

VA Pharmacy Benefits Management Services, Medical Advisory Panel, and VISN Pharmacist Executives

The following recommendations are based on medical evidence, clinician input, and expert opinion. The content of the document is dynamic and will be revised as new information becomes available. The purpose of this document is to assist practitioners in clinical decision-making, to standardize and improve the quality of patient care, and to promote cost-effective drug prescribing. THE CLINICIAN SHOULD USE THIS GUIDANCE AND INTERPRET IT IN THE CLINICAL CONTEXT OF THE INDIVIDUAL PATIENT. INDIVIDUAL CASES THAT ARE EXCEPTIONS TO THE EXCLUSION AND INCLUSION CRITERIA SHOULD BE ADJUDICATED AT THE LOCAL FACILITY ACCORDING TO THE POLICY AND PROCEDURES OF ITS P&T COMMITTEE AND PHARMACY SERVICES.

The Product Information should be consulted for detailed prescribing information.

Addit	ional inclusion criteria for women of childbearing potential
	Pregnancy should be excluded prior to receiving ivermectin
٥	valous autol Information

Supplemental Information

A CDC Health Advisory (8/26/21) discussed a study showing ivermectin dispensing from retail pharmacies increased 24 fold in August over the pre-pandemic baseline and that calls to poison control centers across the U.S. have increased five-fold in July of 2021.

An FDA consumer update (9/3/21) suggests against the use of ivermectin to treat or prevent COVID-19, mention that clinical trials do not show COVID-19 is effective, that large doses are dangerous and that products intended for animals are different from those in humans and should never be used on people.

For additional information, see the National PBM Bulletin from 9/7/21
